

Summer Numeracy Booster Camps 2019

To apply visit: <http://educatingnow.com/camp/>

There are two camps to choose from:

- 1) Full Day Numeracy Booster + Ethnomath July 2-5, 2019
- 2) Afternoons only 'back to school' Numeracy Booster August 19-23, 2019

These summer camps will provide students with opportunities to understand math concepts more deeply, develop strategies to improve fluency, learn on and from the land how to apply math concepts to solve problems and have fun exploring new math concepts in a visual, hands-on way by using:

- Games
- Visuals
- Hands-on manipulatives
- Stories
- Physical movement to help students learn about the important relationships and patterns found in math.

We are looking for students who are interested in: improving their math skills, confidence in math, learning about math in different ways and who enjoy working with other students to explore concepts. We are also focusing on environmental stewardship while learning on and from the land.

We will focus on developing growth mindsets about math because we believe that all people can learn math.

What to Expect:

- A safe and enjoyable environment where all students can achieve success and growth
- A constructivist approach
 - allowing students to be active participants and explore and discover the math concepts for themselves
 - with some direct instruction when needed
 - more structured help if students are struggling to construct their own knowledge
- A focus on communicating understanding, ideas and concepts throughout the session in words, symbols and pictures
- Strategies to improve mental math and fluency with adding, subtracting, multiplying and dividing as well as games to practice the strategies
 - these games can be played at home so that students can continue to develop their fluency
- A variety of strategies, including hands-on manipulatives, to explore:
 - Addition
 - Subtraction

- Multiplication and
 - Division with larger numbers within the context of solving problems
 - Exploring decimals and fractions conceptually using visuals, manipulatives and contexts
 - Patterns and relationships (algebra)
- A belief that we can all learn math and we will persevere and try new ways of looking at concepts so that all students can make sense of them (growth mindset).
 - Learning about our natural environment, including service learning and using math to solve problems related to our environment. (July camp only)

Full Day Numeracy Booster + Ethnomath July 2-5, 2019 at Selkirk Montessori, 2970 Jutland Road. Registration is only \$330 for 4 full days 9 am - 4 pm.

Afternoons only 'back to school' Numeracy Booster August 19-23, 2019 at Selkirk Montessori, 2970 Jutland Road. Registration is only \$210 for 5 afternoons: 1pm -4pm.
